EDUCATION

Purdue University

May 2028

B.S. in Computer Engineering, GPA: 3.67

West Lafayette, IN

- Coursework: Data Structures, Advanced C Programming, Python for Data Science, Digital System Design, Discrete Math, Linear Algebra, Differential Equations, Multivariable Calculus, Electrical Engineering Fundamentals
- Awards: Dean's List, Best AI Hack for Social Good, Best Accessibility Hack, Best Hack @ HackTCNJ

WORK EXPERIENCE

Milliman

May 2026 – Present

AI Product Engineer Intern

Brookfield, WI

- Built an LLM drug price lookup in LangChain that routes complex queries to tiered models, cutting cost 25%
- Cut a cache-rebuild pipeline's runtime from 45–81 minutes to 4–10 minutes via concurrent batched fetches
- Secured API access with key rotation and 2FA, then cached role-based permission lookups to cut latency 30%
- Audited the pricing database, correcting 41,700 records mislabeled active and restoring 7,000 hidden as inactive
- Migrated CI/CD pipelines from Azure DevOps to GitHub Actions, cutting monthly infrastructure costs by \$2,000+

Purdue Extension

Jun 2025 – Present

Assistant Web Developer

West Lafayette, IN

- Developed and maintained responsive React components and internal admin tools for Purdue Extension's ANR sites
- Optimized ANR accessibility and load speed using WordPress, CascadeCMS, and React, lifting engagement by 20%
- Refactored the ANR Expertise Database schema, improving data accuracy 35% and cutting lookup time 40%

PROJECTS

ExtensionLLM | Python, LangChain, Vector Database, React

- Built an LLM-powered search platform helping Purdue Extension educators discover experts and prior project work
- Orchestrated retrieval-augmented generation (RAG) pipelines in LangChain over a vector database
- Indexed internal and external Purdue Extension webpages into vector embeddings for fast semantic retrieval
- Surfaced the most relevant ranked pages, contacts, and prior work through a custom React search frontend

Car Auction Prediction Market | Python, Node.js, Express, React, PostgreSQL

- Shipped a full-stack prediction market end to end, forecasting whether listings sell above or below estimate
- Designed the order book to run independently per listing, keeping each auction's matching fast and conflict-free
- Built the matching engine to instantly track and rank the best price as new bids came in
- Engineered Python scrapers pulling live listings from Sotheby's, Bring a Trailer, and Gooding & Company

Spellkasten | React, D3.js, Node.js, Express, JavaScript

- Built an interactive web app visualizing semantic relationships between 10,000+ English words as a graph
- Implemented shortest-path search letting users trace the fewest-word chain between any two terms
- Rendered force-directed D3.js layouts backed by a Node.js/Express REST API

LEADERSHIP & ACTIVITIES

Embedded Systems @ Purdue

Spring 2026

BB-8 Project, Firmware & Controls Contributor

West Lafayette, IN

- Owned firmware for the robot's motion-control subsystem, programming ESP32 microcontrollers in embedded C++
- Built telemetry scripts and refactored driver header files to log real-time motor, servo, and IMU data
- Collaborated with mechanical, electrical, and computer engineers to design and build a functional BB-8 robot

SKILLS

Languages: Python, TypeScript, JavaScript, Java, C++, C, SQL, C#, Swift, MATLAB

AI & Agent Tooling: LangChain, Claude & GPT APIs, RAG, vector databases, PyTorch, TensorFlow, Scikit-learn, NumPy, Pandas, OpenCV, YOLOv7

Frameworks & APIs: React, Next.js, Node.js/Express, React Native, Spring Boot, .NET, REST APIs

Cloud & DevOps: AWS, Azure, Docker, Podman, Git, GitHub Actions (CI/CD), PostgreSQL, MongoDB, Firebase, Vercel

Certifications: AWS Certified Cloud Practitioner
